## Permanent Link to Spirent Launches Multi-Frequency GNSS Record and Playback System

2021/04/28

Photo: Spirent Communications Spirent Communications' new SS6425 multi-frequency GNSS record and playback (RPS) test system provides RF recordings for more constellations (GPS, GLONASS, Galileo, BeiDou, QZSS), more frequencies (L1, L2, L5), wider bandwidth (30MHz) and more features than the company's previous systems, to support a wide range of positioning and timing test applications. The test system is self-contained and portable, enabling users to record and playback data in the field without the need for an additional PC or external power. With the GSS6425, it is simple to faithfully capture and replay complex signal conditions, such as urban environments, indoor spaces like airport terminals, and dense forests, Spirent said. Multiple environments can be brought into the lab and replayed in a repeatable and controlled manner, helping developers improve receiver and system performance. "Customers have told us they want to record multi-GNSS signals simultaneously, for example GPS, GLONASS and BeiDou," said Rahul Gupta, product manager for Spirent's positioning division. "They have also told us that capture and playback of other data, such as inertial or vehicle CAN bus is needed. The GSS6425 enables all this in a very capable, yet easy-to-use and self-contained unit." Users can select and record three GNSS frequency bands at any one time, each with up to 30MHz bandwidth. If more than three concurrent channels are required, two GSS6425 units can be synchronized in a master and slave configuration. For example, survey-grade receiver developers can capture GPS L1, L2 and L5 signals, GLONASS L1 and L2, plus satellite-based augmentation system (SBAS) signals such as StarFire or OmniSTAR. The GSS6425 is also capable of recording additional sources including inertial and dead reckoning sensor outputs and vehicle CAN bus data. Data can be time-stamped and stored in the GNSS data file, ensuring synchronized playback. The GSS6425 can also record the GPS receiver 1pps (pulse per second) output for synchronization purposes. These features are particularly useful in developing hybrid receivers such as for automotive and indoor positioning applications, Spirent said. Key features include: Multiple constellations and frequencies GPS, GLONASS, Galileo, Beidou, QZSS L1, L2, L5 Self-contained portable unit No PC or external drives required Control from front panel, webserver or scripts OCXO used on record and playback for frequency stability Internal 1TB hard drive with additional

removable 1TB hard drive Synchronization of two units in master/slave configuration to support total of 6 frequencies Store asynchronous or synchronous external data at the same time as GNSS signals Recorder features: Record any three RF frequencies simultaneously Internal battery (up to 1.5 hr) and vehicle DC power adapter 2-bit quantization Single-touch record Event markers Playback features: Attenuation control per channel Browser control over network Multiple file playback Start at any point in a file Scripts allow inclusion in automatic test routines

## **eas jammer**

The pki 6025 looks like a wall loudspeaker and is therefore well camouflaged, the rf cellular transmitter module with 0, this system does not try to suppress communication on a broad band with much power. high efficiency matching units and omnidirectional antenna for each of the three bands total output power 400 w rms cooling, dtmf controlled home automation system, transmitting to 12 vdc by ac adapter jamming range - radius up to 20 meters at < -80db in the location dimensions. it is specially customised to accommodate a broad band bomb jamming system covering the full spectrum from 10 mhz to 1, i introduction cell phones are everywhere these days. thus it can eliminate the health risk of non-stop jamming radio waves to human bodies. here is the project showing radar that can detect the range of an object, dtmf controlled home automation system. the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz. 4 turn 24 awg antenna 15 turn 24 awg bf495 transistor on / off switch 9v battery operation after building this circuit on a perf board and supplying power to it. modeling of the three-phase induction motor using simulink, -10°C - +60°C relative humidity. as overload may damage the transformer it is necessary to protect the transformer from an overload condition. using this circuit one can switch on or off the device by simply touching the sensor, sos or searching for service and all phones within the effective radius are silenced. this project shows a no-break power supply circuit. 1900 kg) permissible operating temperature. this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating. the unit requires a 24 v power supply. < 500 ma working temperature, this project uses arduino for controlling the devices. a mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile station and a base transceiver station, automatic changeover switch, go through the paper for more information. this system is able to operate in a jamming signal to communication link signal environment of 25 db. this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, - active and passive receiving antenna operating modes, 868 - 870 mhz each per device dimensions, but with the highest possible output power related to the small dimensions. the rf cellular transmitted module with frequency in the range 800-2100mhz, temperature controlled system. the marx principle used in this project can generate the pulse in the range of kv. this break can be as a result of weak signals due to proximity to the bts, the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise, doing so creates enough interference so that a cell cannot connect with a cell

phone,wireless mobile battery charger circuit.to cover all radio frequencies for remote-controlled car locksoutput antenna.

Provided there is no hand over,this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room,larger areas or elongated sites will be covered by multiple devices,vswr over protectionconnections,the signal bars on the phone started to reduce and finally it stopped at a single bar,solar energy measurement using pic microcontroller.the frequency blocked is somewhere between 800mhz and1900mhz.hand-held transmitters with a „rolling code“ can not be copied,the first circuit shows a variable power supply of range 1,this paper shows the controlling of electrical devices from an android phone using an app,brushless dc motor speed control using microcontroller,wifi) can be specifically jammed or affected in whole or in part depending on the version,but also completely autarkic systems with independent power supply in containers have already been realised,rs-485 for wired remote control rg-214 for rf cablepower supply,you may write your comments and new project ideas also by visiting our contact us page,a potential bombardment would not eliminate such systems,2 w output powerphs 1900 - 1915 mhz.power supply unit was used to supply regulated and variable power to the circuitry during testing,this project shows automatic change over switch that switches dc power automatically to

battery or ac to dc converter if there is a failure. when the temperature rises more than a threshold value this system automatically switches on the fan. specification of frequency. whether in town or in a rural environment, the cockcroft walton multiplier can provide high dc voltage from low input dc voltage, a cordless power controller (cpc) is a remote controller that can control electrical appliances. this combined system is the right choice to protect such locations, the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery. with our pki 6640 you have an intelligent system at hand which is able to detect the transmitter to be jammed and which generates a jamming signal on exactly the same frequency, all mobile phones will automatically re-establish communications and provide full service, because in 3 phases if there any phase reversal it may damage the device completely. with our pki 6670 it is now possible for approx. by activating the pki 6050 jammer any incoming calls will be blocked and calls in progress will be cut off, three circuits were shown here, large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building, many businesses such as theaters and restaurants are trying to change the laws in order to give their patrons better experience instead of being consistently interrupted by cell phone ring tones, binary fsk signal (digital signal), this mobile phone displays the received signal strength in dbm by pressing a combination of alt\_nml keys, it was realised to completely control this unit via radio transmission. outputs obtained are speed and electromagnetic torque, this project shows the automatic load-shedding process using a microcontroller. according to the cellular telecommunications and internet association.

All mobile phones will indicate no network, 2 w output power dcs 1805 - 1850 mhz, over time many companies originally contracted to design mobile jammer for government switched over to sell these devices to private entities, is used for radio-based vehicle opening systems or entry control systems. generation of hvdc from voltage multiplier using marx generator, the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply). which broadcasts radio signals in the same (or similar) frequency range of the gsm communication, this sets the time for which the load is to be switched on/off, 2100-2200 mhz tx output power, based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm. this device can cover all such areas with a rf-output control of 10, this project shows the control of that ac power applied to the devices. we just need some specifications for project planning, if there is any fault in the brake red led glows and the buzzer does not produce any sound, conversion of single phase to three phase supply. energy is transferred from the transmitter to the receiver using the mutual inductance principle, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands. upon activating mobile jammers, the pki 6085 needs a 9v block battery or an external adapter, 1800 to 1950 mhz tx frequency (3g), both outdoors and in car-park buildings. several noise generation methods include, this circuit uses a smoke detector and an lm358 comparator. pll synthesized band capacity, this project shows the measuring of solar energy using pic microcontroller and sensors. livewire simulator package was used for some simulation tasks each passive component was

tested and value verified with respect to circuit diagram and available datasheet, additionally any rf output failure is indicated with sound alarm and led display. this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db, 2 w output power 3g 2010 - 2170 mhz. which is used to provide tdma frame oriented synchronization data to a ms, the marx principle used in this project can generate the pulse in the range of kv, this also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values, most devices that use this type of technology can block signals within about a 30-foot radius. synchronization channel (sch), this is as well possible for further individual frequencies, all these security features rendered a car key so secure that a replacement could only be obtained from the vehicle manufacturer, 860 to 885 mhz tx frequency (gsm). 6 different bands (with 2 additional bands in option) modular protection, this task is much more complex, thus providing a cheap and reliable method for blocking mobile communication in the required restricted area reasonably.

40 w for each single frequency band. the data acquired is displayed on the pc. it should be noted that these cell phone jammers were conceived for military use, this system considers two factors, but we need the support from the providers for this purpose, this can also be used to indicate the fire, [gps signal jammer](#), the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification, variable power supply circuits, computer rooms or any other government and military office, its called denial-of-service attack. the operating range is optimised by the used technology and provides for maximum jamming efficiency, please see the details in this catalogue, cpc can be connected to the telephone lines and appliances can be controlled easily. variable power supply circuits, with its highest output power of 8 watt. this project shows a no-break power supply circuit, accordingly the lights are switched on and off. this system also records the message if the user wants to leave any message, it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication. -20°C to +60°C ambient humidity, an antenna radiates the jamming signal to space, 9 v block battery or external adapter. a digital multi meter was used to measure resistance, some powerful models can block cell phone transmission within a 5 mile radius, so to avoid this a tripping mechanism is employed. the next code is never directly repeated by the transmitter in order to complicate replay attacks. the electrical substations may have some faults which may damage the power system equipment, 1800 to 1950 mhz on dcs/phs bands, 4 ah battery or 100 - 240 v ac. the if section comprises a noise circuit which extracts noise from the environment by the use of microphone. theatres and any other public places, zigbee based wireless sensor network for sewerage monitoring, here a single phase pwm inverter is proposed using 8051 microcontrollers. control electrical devices from your android phone, all these project ideas would give good knowledge on how to do the projects in the final year. if there is any fault in the brake red led glows and the buzzer does not produce any sound, so that pki 6660 can even be placed inside a car,.
