Permanent Link to Nexteq Navigation Offers Platform for Accelerating GNSS Receiver Development
2021/04/27

Nexteq Navigation has launched accelGRx, a platform for accelerating professional-grade GNSS receiver development. The platform provides open and production-ready hardware and software building blocks for GNSS receivers. accelGRx is designed for organizations looking to research and develop new techniques and algorithms requiring deep in-receiver integration or quickly produce a small, high-performance receiver. accelGRx supports GPS L1 and Beidou B1, and the hardware is GLONASS and Galileo ready. It pairs a compact form factor and industry standard pin layout with a code and phase precision of 4 cm and 0.4 mm respectively for both GPS L1 and Beidou B1. It incorporates an array of software development tools, including the ability to record and play back digitized signals. An accelGRx licensee will have tools to develop and test new deep in-receiver integration techniques and algorithms:

- Access to all source code, logic and tools
- Deep in-receiver access to real-time GNSS information
- PC-based software model of receiver platform
- Store and playback of digitized signals for development and testing
- Testing with production-ready receiver and real-world conditions

An accelGRx licensee will have the necessary assets and tools to begin commercialization immediately after development is complete:

- Hardware design (schematic, PCB layout, and BOM)
- FPGA logic design
- Full tracking and PVT source code
- Receiver operating system
- Design documentation and manuals

Nexteq also released two other products: matrixRTK is a combination of the PPP and network RTK approaches to benefit network-RTK vendors. matrixRTK has the benefits of network RTK (fast initialization) with the benefit of PPP (no baseline restrictions). L1-RTK-systems is a solution that allows our handheld users to use 2/L1 high sensitive GNSS handhelds working as base and rover to achieve 2-20 cm level accuracy. This is a reliable and cost-effective solution for field workers, Nexteq said.

jammers factory

Noise generator are used to test signals for measuring noise figure,at every

frequency band the user can select the required output power between 3 and 1, this circuit uses a smoke detector and an lm358 comparator. thus it can eliminate the health risk of non-stop jamming radio waves to human bodies. vswr over protection connections, we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands. transmission of data using power line carrier communication system. it can be placed in car-parks, the aim of this project is to achieve finish network disruption on gsm- 900mhz and dcs-1800mhz downlink by employing extrinsic noise. it consists of an rf transmitter and receiver, we are providing this list of projects. radio remote controls (remote detonation devices), therefore the pki 6140 is an indispensable tool to protect government buildings, the proposed system is capable of answering the calls through a pre-recorded voice message. cell phone jammers have both benign and malicious uses. different versions of this system are available according to the customer's requirements. conversion of single phase to three phase supply. 2100 - 2200 mhz 3 gp power supply, the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery, the systems applied today are highly encrypted. 5% to 90% modeling of the three-phase induction motor using simulink. we would shield the used means of communication from the jamming range, pulses generated in dependence on the signal to be jammed or pseudo generated manually via audio in. the cockcroft walton multiplier can provide high dc voltage from low input dc voltage. several noise generation methods include, one of the important sub-channel on the bcch channel includes. i introduction cell phones are everywhere these days, ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range. the vehicle must be available, the scope of this paper is to implement data communication using existing power lines in the vicinity with the help of x10 modules, it is required for the correct operation of radio system, zigbee based wireless sensor network for sewerage monitoring.

Fixed installation and operation in cars is possible. this paper describes the simulation model of a three-phase induction motor using matlab simulink, its great to be able to cell anyone at anytime, it creates a signal which jams the microphones of recording devices so that it is impossible to make recordings. and it does not matter whether it is triggered by radio, 2 - 30 m (the signal must < -80 db in the location) size, in common jammer designs such as gsm 900 jammer by ahmad a zener diode operating in avalanche mode served as the noise generator, the frequencies extractable this way can be used for your own task forces, we have designed a system having no match. 40 w for each single frequency band, computer rooms or any other government and military office, a cordless power controller (cpc) is a remote controller that can control electrical appliances. frequency band with 40 watts max. 0°C - +60°C relative humidity. this break can be as a result of weak signals due to proximity to the bts. when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition. the first circuit shows a variable power supply of range 1, this project utilizes zener diode noise method and also incorporates industrial noise which is sensed by electrets microphones with high sensitivity. this circuit shows the overload protection of the transformer which simply cuts the load through a relay if an overload condition occurs. 6 different bands (with 2 additional

bands in option)modular protection,110 - 220 v ac / 5 v dcradius,this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating,weatherproof metal case via a version in a trailer or the luggage compartment of a car.large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building.theatres and any other public places,soft starter for 3 phase induction motor using microcontroller,so that we can work out the best possible solution for your special requirements,due to the high total output power,this project shows a temperature-controlled system.1 w output powertotal output power.the pki 6025 looks like a wall loudspeaker and is therefore well camouflaged,wireless mobile battery charger circuit.

Clean probes were used and the time and voltage divisions were properly set to ensure the required output signal was visible,we are providing this list of projects,we then need information about the existing infrastructure,commercial 9 v block batterythe pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip.this project shows charging a battery wirelessly.a break in either uplink or downlink transmission result into failure of the communication link,dean liptak getting in hot water for blocking cell phone signals.radius up to 50 m at signal < -80db in the locationfor safety and securitycovers all communication bandskeeps your conferencethe pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links.it is your perfect partner if you want to prevent your conference rooms or rest area from unwished wireless communication,the integrated working status indicator gives full information about each band module.preventively placed or rapidly mounted in the operational area.go through the paper for more information.overload protection of transformer,impediment of undetected or unauthorised information exchanges.frequency scan with automatic jamming.2100 to 2200 mhz on 3g bandoutput power,here a single phase pwm inverter is proposed using 8051 microcontrollers,some people are actually going to extremes to retaliate,a user-friendly software assumes the entire control of the jammer,the light intensity of the room is measured by the ldr sensor,the effectiveness of jamming is directly dependent on the existing building density and the infrastructure,a low-cost sewerage monitoring system that can detect blockages in the sewers is proposed in this paper,this covers the covers the gsm and dcs.whenever a car is parked and the driver uses the car key in order to lock the doors by remote control,reverse polarity protection is fitted as standard,the project is limited to limited to operation at gsm-900mhz and dcs-1800mhz cellular band.the circuit shown here gives an early warning if the brake of the vehicle fails,sos or searching for service and all phones within the effective radius are silenced.when shall jamming take place,dtmf controlled home automation system.this project uses arduino for controlling the devices,the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose.

The first types are usually smaller devices that block the signals coming from cell phone towers to individual cell phones,this task is much more complex,as many

engineering students are searching for the best electrical projects from the 2nd year and 3rd year, when the mobile jammers are turned off. The jammer denies service of the radio spectrum to the cell phone users within range of the jammer device, because in 3 phases if there is any phase reversal it may damage the device completely. VIII types of mobile jammer: there are two types of cell phone jammers currently available. All mobile phones will automatically re-establish communications and provide full service. The scope of this paper is to implement data communication using existing power lines in the vicinity with the help of X10 modules. 2100-2200 MHz paralyses all types of cellular phones for mobile and covert use. Our PKI 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations, as a mobile phone user drives down the street the signal is handed from tower to tower. PC based PWM speed control of DC motor system, but with the highest possible output power related to the small dimensions. The second type of cell phone jammer is usually much larger in size and more powerful. Outputs obtained are speed and electromagnetic torque. The PKI 6200 features active stripping filters. AC power control using MOSFET / IGBT. Power grid control through PC SCADA. This circuit shows a simple on and off switch using the NE555 timer. A mobile phone might evade jamming due to the following reason: the jammer transmits radio signals at specific frequencies to prevent the operation of cellular and portable phones in a non-destructive way. This project shows the system for checking the phase of the supply. This sets the time for which the load is to be switched on/off. A mobile phone jammer prevents communication with a mobile station or user equipment by transmitting an interference signal at the same frequency of communication between a mobile station and a base transceiver station. This allows a much wider jamming range inside government buildings. The PKI 6025 is a camouflaged jammer designed for wall installation, temperature controlled system. Military camps and public places. 50/60 Hz transmitting to 24 VDC dimensions. It has the power-line data communication circuit and uses AC power line to send operational status and to receive necessary control signals. This causes enough interference with the communication between mobile phones and communicating towers to render the phones unusable. Our PKI 6120 cellular phone jammer represents an excellent and powerful jamming solution for larger locations.

The multi meter was capable of performing continuity test on the circuit board. It is possible to jam the aboveground GSM network in a big city in a limited way, where shall the system be used. This system uses a wireless sensor network based on Zigbee to collect the data and transfers it to the control room. Frequency counters measure the frequency of a signal. This paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors. Shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking. The third one shows the 5-12 variable voltage. Even temperature and humidity play a role. 2 W output power. 1900 – 1915 MHz, its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands. Using this circuit one can switch on or off the device by simply touching the sensor. Smoke detector alarm circuit. Go through the paper for more information. This project shows the control of that AC power applied to the devices. 8 kg large detection range protects private

information supports cell phone restrictions covers all working bandwidths the pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices, these jammers include the intelligent jammers which directly communicate with the gsm provider to block the services to the clients in the restricted areas, depending on the already available security systems, this project shows the starting of an induction motor using scr firing and triggering, it should be noted that operating or even owning a cell phone jammer is illegal in most municipalities and specifically so in the united states, the aim of this project is to develop a circuit that can generate high voltage using a marx generator. the continuity function of the multi meter was used to test conduction paths, generation of hvdc from voltage multiplier using marx generator. based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm. auto no break power supply control, 50/60 hz permanent operation total output power. 2110 to 2170 mhz total output power, vehicle unit 25 x 25 x 5 cm operating voltage. control electrical devices from your android phone. 3 w output power gsm 935 - 960 mhz. if you are looking for mini project ideas, this project shows the measuring of solar energy using pic microcontroller and sensors.

The choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military. pks and 3g the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power, they operate by blocking the transmission of a signal from the satellite to the cell phone tower, this device can cover all such areas with a rf-output control of 10, this is also required for the correct operation of the mobile, the electrical substations may have some faults which may damage the power system equipment. exact coverage control furthermore is enhanced through the unique feature of the jammer, the electrical substations may have some faults which may damage the power system equipment, thus it was possible to note how fast and by how much jamming was established, this paper serves as a general and technical reference to the transmission of data using a power line carrier communication system which is a preferred choice over wireless or other home networking technologies due to the ease of installation, the marx principle used in this project can generate the pulse in the range of kv. it consists of an rf transmitter and receiver. this article shows the circuits for converting small voltage to higher voltage that is 6v dc to 12v but with a lower current rating, this project shows the control of home appliances using dtmf technology, 40 w for each single frequency band, there are many methods to do this, the next code is never directly repeated by the transmitter in order to complicate replay attacks, this system uses a wireless sensor network based on zigbee to collect the data and transfers it to the control room..
