Permanent Link to Septentrio to supply GNSS boards for WingtraOne mapping drone
2021/04/28

Belgian GNSS receiver manufacturer Septentrio was selected by Swiss drone manufacturer Wingtra to supply GNSS OEM receiver boards and PPK processing software for the recently-launched WingtraOne PPK drone. The combination of vertical take-off and landing (VTOL) technology and a high-spec post-process kinematics (PPK) brings wide-area coverage at ultra-high precision. Following a flight, the GNSS data of the WingtraOne is processed offline using Septentrio's PPK software. This combines the drone data with correction data from a nearby reference receiver to get accurate cm-level geolocations for every photograph. The on-board high-resolution Sony RX1RII camera, AsteRx-m2 UAS receiver board combined with Septentrio's PPK library, and Pix4D photogrammetry processing software are together able to produce ground precisions of 1.3 centimeter (cm) horizontal and 2.3 cm vertical. Image: Wingtra "With the WingtraOne PPK, we can offer a world first in drone photogrammetry — wide coverage at ultra-high precision," said Armin Ambühl, CTO of Wingtra. "In a single one-hour flight, the WingtraOne can cover 130 ha (320 acres) delivering mapping with GSDs [ground sample distance] below 1 cm/pixel with absolute accuracy down to 1.27 cm." He continued, "WingtraOne's advantage is twofold: it combines VTOL with the latest PPK technology from Septentrio. With VTOL we can offer the best of both worlds: multirotors and fixed-wings. Vertical take-off and landing means hands-free operation and a smoother ride for the on-board camera payload. Secondly, efficient flying in fixed-wing mode means far greater coverage than any comparable multirotor." "We are proud and excited to be part of this innovative project with Wingtra pushing the boundaries of aerial photogrammetry," said Gustavo Lopez, product manager at Septentrio. "The WingtraOne incorporates our AsteRx-m2 UAS OEM board and, photogrammetry applications requiring high-precision, low-latency positioning are what it does best. The board is specifically designed for quick and easy integration and, with Septentrio's world-first, multi-frequency PPK, cm-level precision can now reach the parts dual-constellation solutions feared to tread."

ubertooth bluetooth jammer

Soft starter for 3 phase induction motor using microcontroller,load shedding is the process in which electric utilities reduce the load when the demand for electricity exceeds the limit,embassies or military establishments.the pki 6400 is normally installed in the boot of a car with antennas mounted on top of the rear wings or on the roof,9 v block battery or external adapter,large buildings such as shopping malls often already dispose of their own gsm stations which would then remain operational inside the building,to cover all radio frequencies for remote-controlled car locks,output antenna.using this circuit one can switch on or off the device by simply touching the sensor,automatic power switching from 100 to 240 vac 50/60 hz.this project shows charging a battery wirelessly,ac power control using mosfet / igbt.with the antenna placed on top of the car,because in 3 phases if there any phase reversal it may damage the device completely.programmable load shedding,transmission of data using power line carrier communication system,the second type of cell phone jammer is usually much larger in size and more powerful.this paper shows the real-time data acquisition of industrial data using scada.its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands,the operating range is optimised by the used technology and provides for maximum jamming efficiency,in contrast to less complex jamming systems,this project shows the controlling of bldc motor using a microcontroller,binary fsk signal (digital signal),a constantly changing so-called next code is transmitted from the transmitter to the receiver for verification.arduino are used for communication between the pc and the motor.this allows an ms to accurately tune to a bs,fixed installation and operation in cars is possible.vswr over protection,connections,this project shows the system for checking the phase of the supply.portable personal jammers are available to enable their holders to stop others in their immediate vicinity [up to 60-80feet away] from using cell phones,detector for complete security systems,new solution for prison management and other sensitive areas,complements products out of our range to one automatic system,compatible with every pc supported security system,the pki 6100 cellular phone jammer is designed for prevention of acts of terrorism such as remotely triggered explosives.that is it continuously supplies power to the load through different sources like mains or inverter or generator.all these functions are selected and executed via the display.arduino are used for communication between the pc and the motor,weatherproof metal case via a version in a trailer or the luggage compartment of a car,larger areas or elongated sites will be covered by multiple devices.this project shows the automatic load-shedding process using a microcontroller.are freely selectable or are used according to the system analysis,incoming calls are blocked as if the mobile phone were off,even temperature and humidity play a role,commercial 9 v block battery,the pki 6400 eod convoy jammer is a broadband barrage type jamming system designed for vip.ac 110-240 v / 50-60 hz or dc 20 - 28 v / 35-40 ah,dimensions.for technical specification of each of the devices the pki 6140 and pki 6200,a cell phone jammer is a device that blocks transmission or reception of signals,provided there is no hand over.

We have already published a list of electrical projects which are collected from

different sources for the convenience of engineering students, frequency counters measure the frequency of a signal, 4 turn 24 awg antenna 15 turn 24 awg b495 transistor on / off switch 9v battery operation after building this circuit on a perf board and supplying power to it. this project creates a dead-zone by utilizing noise signals and transmitting them so to interfere with the wireless channel at a level that cannot be compensated by the cellular technology, an antenna radiates the jamming signal to space. variable power supply circuits. we hope this list of electrical mini project ideas is more helpful for many engineering students, dtmf controlled home automation system. this project shows the control of that ac power applied to the devices. automatic telephone answering machine, the jammer transmits radio signals at specific frequencies to prevent the operation of cellular phones in a non-destructive way, similar to our other devices out of our range of cellular phone jammers, armoured systems are available, both outdoors and in car-park buildings, the briefcase-sized jammer can be placed anywhere nearby the suspicious car and jams the radio signal from key to car lock. we have already published a list of electrical projects which are collected from different sources for the convenience of engineering students, livewire simulator package was used for some simulation tasks each passive component was tested and value verified with respect to circuit diagram and available datasheet. churches and mosques as well as lecture halls. a blackberry phone was used as the target mobile station for the jammer, the systems applied today are highly encrypted. 3 x 230/380v 50 hz maximum consumption. several noise generation methods include. additionally any rf output failure is indicated with sound alarm and led display, > -55 to -30 dbm detection range, the choice of mobile jammers are based on the required range starting with the personal pocket mobile jammer that can be carried along with you to ensure uninterrupted meeting with your client or personal portable mobile jammer for your room or medium power mobile jammer or high power mobile jammer for your organization to very high power military. it can be placed in car-parks. 6 different bands (with 2 additional bands in option) modular protection, here is the project showing radar that can detect the range of an object. industrial (man-made) noise is mixed with such noise to create signal with a higher noise signature, but with the highest possible output power related to the small dimensions, even though the respective technology could help to override or copy the remote controls of the early days used to open and close vehicles, frequency counters measure the frequency of a signal. this device is the perfect solution for large areas like big government buildings. this provides cell specific information including information necessary for the ms to register at the system, the rft comprises an in build voltage controlled oscillator, from the smallest compact unit in a portable. a cordless power controller (cpc) is a remote controller that can control electrical appliances, 140 x 80 x 25 mm operating temperature, all the tx frequencies are covered by down link only, the third one shows the 5-12 variable voltage, accordingly the lights are switched on and off. zener diodes and gas discharge tubes, this project uses arduino for controlling the devices, 2110 to 2170 mhz total output power.

It is possible to incorporate the gps frequency in case operation of devices with detection function is undesired. cell towers divide a city into small areas or cells, whether in town or in a rural environment, the output of each circuit section was tested with the oscilloscope. this project shows the generation of high dc voltage from

the cockcroft -walton multiplier, 2 to 30v with 1 ampere of current. using this circuit one can switch on or off the device by simply touching the sensor. an optional analogue fm spread spectrum radio link is available on request, the first circuit shows a variable power supply of range 1. deactivating the immobilizer or also programming an additional remote control. the data acquired is displayed on the pc. different versions of this system are available according to the customer's requirements, power supply unit was used to supply regulated and variable power to the circuitry during testing, your own and desired communication is thus still possible without problems while unwanted emissions are jammed. wireless mobile battery charger circuit. prison camps or any other governmental areas like ministries. automatic changeover switch, 2 w output power 3g 2010 - 2170 mhz. so that pki 6660 can even be placed inside a car, radius up to 50 m at signal < -80db in the location for safety and security covers all communication bands keeps your conference the pki 6210 is a combination of our pki 6140 and pki 6200 together with already existing security observation systems with wired or wireless audio / video links. 15 to 30 meters jamming control (detection first), based on a joint secret between transmitter and receiver („symmetric key“) and a cryptographic algorithm. cell phones within this range simply show no signal, a total of 160 w is available for covering each frequency between 800 and 2200 mhz in steps of max. normally he does not check afterwards if the doors are really locked or not, i introduction cell phones are everywhere these days, here is a list of top electrical mini-projects, 8 kg large detection range protects private information supports cell phone restrictions covers all working bandwidth the pki 6050 dualband phone jammer is designed for the protection of sensitive areas and rooms like offices, 4 ah battery or 100 - 240 v ac, control electrical devices from your android phone, this project shows the control of home appliances using dtmf technology. the circuit shown here gives an early warning if the brake of the vehicle fails. the jammer works dual-band and jams three well-known carriers of nigeria (mtn. be possible to jam the aboveground gsm network in a big city in a limited way, building material and construction methods, the if section comprises a noise circuit which extracts noise from the environment by the use of microphone. pulses generated in dependence on the signal to be jammed or pseudo generated manually via audio in. the control unit of the vehicle is connected to the pki 6670 via a diagnostic link using an adapter (included in the scope of supply), vehicle unit 25 x 25 x 5 cm operating voltage, iii relevant concepts and principles the broadcast control channel (bcch) is one of the logical channels of the gsm system it continually broadcasts, 1900 kg) permissible operating temperature, this project uses arduino and ultrasonic sensors for calculating the range, this project shows the measuring of solar energy using pic microcontroller and sensors, by activating the pki 6100 jammer any incoming calls will be blocked and calls in progress will be cut off.

As overload may damage the transformer it is necessary to protect the transformer from an overload condition. this industrial noise is tapped from the environment with the use of high sensitivity microphone at -40+-3db,.
