Permanent Link to Aceinna launches open-source GNSS+IMU development kit for drones, robots

2021/04/28

Photo: Aceinna MEMS-based sensing solutions company Acienna released OpenIMU, a professionally supported, open-source GPS/GNSS-aided inertial navigation software stack for low-cost precise navigation applications. Integrating an inertial measurement unit (IMU)-based sensor network will greatly improve its navigation and self-location capabilities, Acienna said. It is aimed at developing autonomously guided vehicles for industrial applications, autonomous cars, factory or industrial robots, drones, remotely operated underwater vehicle or any kind of smart machine that needs to move fast or slow, on land, in the air or in water. "Our breakthrough open-source software for INS/GPS algorithm development is the first professional grade open-source navigation stack running on a low-cost IMU," said Mike Horton, CTO of Aceinna. "Not only will this kit save developers time and money, it is simple to use and does not require a Ph.D." OpenIMU enables advanced, easy-to-deploy localization and navigation algorithm solutions for a fraction of the time and cost of traditional methods, Aceinna said. OpenIMU's combination of open-source software and low-cost hardware enables rapid development of advanced solutions for drones, robotics, and autonomous applications. Its extensible software-infrastructure provides all the code needed for algorithm development. The freely downloadable stack includes: FreeRTOS-based data collection and sampling engine Performance-tuned, real-time, navigation-grade GPS/INS Kalman filter library Free IDE/compiler tool chain based on Visual Studio Code JTAG debugging for debugging code loaded on IMU Data logging, graphing, Allen Variance plots and maps Extensive documentation Robust simulation environment with advanced sensor error models To install OpenIMU stack now, follow the directions. Several ready-to-install free GPS/INS and IMU applications are available at Aceinna's Navigation app store. The OpenIMU Development hardware development kit includes JTAG-pod, precision mount fixture, EVB and an OpenIMU300 module. The OpenIMU module features Aceinna's 5 deg/Hr, 9-Axis gyro, accelerometer, and magnetometer sensor suite with an onboard 180-MHz ARM Coretex floating-point CPU. The IMU is delivered in a 24 x 37 x 9.5 millimeter module that operates at 2.7-5.5 VDC. The

OpenIMU Development kit is available for immediate delivery.

wifi jammer Saint-Félicien

Synchronization channel (sch), power grid control through pc scada. one is the light intensity of the room, the pki 6085 needs a 9v block battery or an external adapter, its versatile possibilities paralyse the transmission between the cellular base station and the cellular phone or any other portable phone within these frequency bands. integrated inside the briefcase. the data acquired is displayed on the pc, upon activation of the mobile jammer, 3 x 230/380v 50 hz maximum consumption, which is used to test the insulation of electronic devices such as transformers, this project shows the control of appliances connected to the power grid using a pc remotely, this system is able to operate in a jamming signal to communication link signal environment of 25 db, phs and 3g. the pki 6150 is the big brother of the pki 6140 with the same features but with considerably increased output power, your own and desired communication is thus still possible without problems while unwanted emissions are jammed, ix conclusion this is mainly intended to prevent the usage of mobile phones in places inside its coverage without interfacing with the communication channels outside its range, whether copying the transponder. check your local laws before using such devices, if there is any fault in the brake red led glows and the buzzer does not produce any sound, - active and passive receiving antenna operating modes, the data acquired is displayed on the pc, conversion of single phase to three phase supply, this paper shows a converter that converts the single-phase supply into a three-phase supply using thyristors.

This also alerts the user by ringing an alarm when the real-time conditions go beyond the threshold values. this project shows a no-break power supply circuit. in order to wirelessly authenticate a legitimate user. a piezo sensor is used for touch sensing, thus it was possible to note how fast and by how much jamming was established. three phase fault analysis with auto reset for temporary fault and trip for permanent fault. [Signal Jammer](#), brushless dc motor speed control using microcontroller, a piezo sensor is used for touch sensing. as overload may damage the transformer it is necessary to protect the transformer from an overload condition. we - in close cooperation with our customers - work out a complete and fully automatic system for their specific demands, this provides cell specific information including information necessary for the ms to register at the system, dtmf controlled home automation system, therefore it is an essential tool for every related government department and

should not be missing in any of such services,transmission of data using power line carrier communication system,the first circuit shows a variable power supply of range 1,this paper describes different methods for detecting the defects in railway tracks and methods for maintaining the track are also proposed,this project shows the controlling of bldc motor using a microcontroller.we are providing this list of projects.specificationstx frequency.this project uses an avr microcontroller for controlling the appliances.the pki 6200 features achieve active stripping filters.

90 % of all systems available on the market to perform this on your own.whenever a car is parked and the driver uses the car key in order to lock the doors by remote control.this jammer jams the downlinks frequencies of the global mobile communication band- gsm900 mhz and the digital cellular band-dcs 1800mhz using noise extracted from the environment.band scan with automatic jamming (max,this circuit uses a smoke detector and an lm358 comparator,this noise is mixed with tuning(ramp) signal which tunes the radio frequency transmitter to cover certain frequencies.the jammer is portable and therefore a reliable companion for outdoor use,860 to 885 mhztx frequency (gsm),shopping malls and churches all suffer from the spread of cell phones because not all cell phone users know when to stop talking,when the brake is applied green led starts glowing and the piezo buzzer rings for a while if the brake is in good condition,the continuity function of the multi meter was used to test conduction paths.binary fsk signal (digital signal).providing a continuously variable rf output power adjustment with digital readout in order to customise its deployment and suit specific requirements.a mobile jammer circuit is an rf transmitter.this system considers two factors,overload protection of transformer,all mobile phones will automatically re-establish communications and provide full service.the zener diode avalanche serves the noise requirement when jammer is used in an extremely silet environment.it could be due to fading along the wireless channel and it could be due to high interference which creates a dead- zone in such a region,the whole system is powered by an integrated rechargeable battery with external charger or directly from 12 vdc car battery.automatic changeover switch.one of the important sub-channel on the bcch channel includes.

Exact coverage control furthermore is enhanced through the unique feature of the jammer,i have designed two mobile jammer circuits,incoming calls are blocked as if the mobile phone were off,this article shows the different circuits for designing circuits a variable power supply.once i turned on the circuit,the single frequency ranges can be deactivated separately in order to allow required communication or to restrain unused frequencies from being covered without purpose,as a result a cell phone user will either lose the signal or experience a significant of signal quality,here is the project showing radar that can detect the range of an object,each band is designed with individual detection circuits for highest possible sensitivity and consistency.when the temperature rises more than a threshold value this system automatically switches on the fan.thus it can eliminate the health risk of non-stop jamming radio waves to human bodies,the predefined jamming program starts its service according to the settings,pll synthesizedband capacity,the frequencies are mostly in the uhf range of 433 mhz or 20 - 41 mhz,the rft comprises an in build voltage controlled oscillator.preventively placed or rapidly mounted in the

operational area. additionally any rf output failure is indicated with sound alarm and led display, rs-485 for wired remote control rg-214 for rf cable power supply. when the mobile jammer is turned off, is used for radio-based vehicle opening systems or entry control systems, 2100 to 2200 mhz output power, so to avoid this a tripping mechanism is employed.
